ABOUT

Independent builder with 15 years of experience and 10+ shipped products across DeFi, on-chain tooling, and automation. I take projects from idea to deployment autonomously - making technical decisions, moving fast, and owning the outcome end to end. My work spans smart contract development, trading bots, on-chain protocols, and product design. I integrate AI tooling deeply into my workflow and have been a long-term crypto investor since my first lines of on-chain code.

SKILLS

Frontend

`React` `Vue` `TypeScript` `Tailwind`

Backend & Automation

`Node.js` `Next.js` `Bots` `APIs` `Scrapers`

Blockchain

`Solidity` `EVM` `DeFi` `viem`

Tooling

`LLMs (Claude Code)` `AI workflows` `Git`

SELECTED PROJECTS

2026	**x402 Wrapper for X API**
	Open wrapper enabling AI agents to access X (Twitter) data via the x402 payment protocol. An early experiment at the intersection of AI agents and crypto-native micropayments.
	↗ announcement

2025	**Pocket Wallet**
	Chain-abstracted EVM wallet - spend any token from any chain, anywhere, with no gas fees, no seed phrases, and 5-second passkey onboarding. Full device abstraction across mobile, desktop, and tablet. Unified dApp store. MVP complete, currently seeking funding.
	↗ demo `flagship · in progress`

2025	**Unblur**
	On-chain puzzle game built for the Blast mobile app.
	↗ post

2025	**Security disclosure - Blast App**
	Discovered and responsibly disclosed a high-severity vulnerability in the official Blast L2 wallet application.
	↗ disclosure `high severity`

2024	**Blastr**
	Refundable NFT protocol on Blast L2 - users could mint NFTs while keeping their ETH yield-bearing and fully refundable. Won the Blast Big Bang competition and reached top 10 across all Blast apps. Built by a team of two.

$20M+   **20k+**
peak TVL   daily users at peak

↗ blastr.xyz   `blast big bang winner`

2024	**Stalkr**
	On-chain tool for discreetly tracking wallet movements on Crypto Twitter.
	↗ announcement

2023	**0xTerminal**
	Crypto news trading terminal - aggregates market-moving news and surfaces price impact data in real time, built for traders who act on information speed.
	↗ announcement ↗ demo

2023	**Guestlisted**
	On-chain NFT collection with real-world utility, free to mint. Explored the intersection of on-chain identity and event access.
	↗ announcement

2023	**xFriendTech · WenBridge · 0xT News · Tradebird**
	A cluster of experimental tools: a Chrome extension for friend.tech, a crypto bridge for emerging chains, an automated news-to-price-impact bot, and an early social trading experiment.
	↗ xFriendTech ↗ WenBridge ↗ 0xT News

2021	**Automated Trading Bots**
	Built Node.js bots that monitored Elon Musk's tweets in real time and executed automated trades on DOGE and related assets based on sentiment signals. First hands-on exploration of algorithmic trading and market automation.

2012–2024	**Co-founder, Web Studio**
	Co-founded a web studio immediately after graduating. Built websites and e-commerce platforms for a wide range of businesses - from scratch and on WordPress - over a 12-year period. Operated fully autonomously as a self-employed builder.
